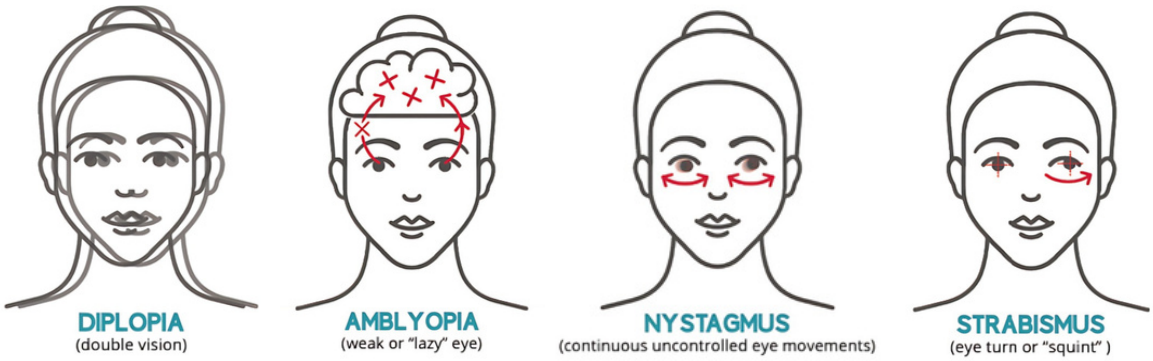
BIOS
British and Irish Orthoptic Society

Do you like science and helping others?

Orthoptists are specialists in assessing how the eyes and brain work together to make sure that you can see.

They help children and adults who have problems with their eyes, such as amblyopia (when vision in one eye doesn't develop as well) or strabismus (when the eyes don't line up properly).



Orthoptists work in NHS hospitals, clinics, schools, and universities.

There are lots of opportunities within to develop your career within orthoptics, including research, teaching and a range of advanced specialisms within eyecare.

Orthoptics can be studied at university or through an apprenticeship, leading to a fulfilling career as an orthoptist, helping people achieve their best possible vision.
