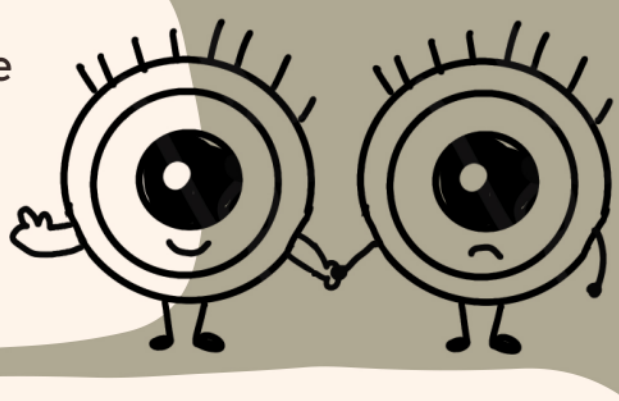
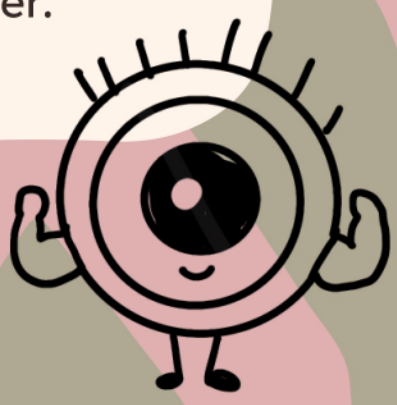
EXPLAINING AMBLYOPIA TO YOUR CHILD

Amblyopia means that you have one eye that is nice and strong and another that needs a little help to get stronger.



Many children have this. There are probably a few children in your school who wear patches.

Always wear your patch over your strong eye. This will make your weak eye work harder and get better.



Do you like animal patches, or space patches, or robot patches? What is your favourite kind of patch?

It can take some time for patching to work but we can track your progress every day.

We will talk with a nice doctor about your patching. Follow their instructions, and your weak eye should get better soon.

Every day you wear your patch, we will do something fun. We can play a game together, or colour in, or read a book together. Can you think of some things you'd like to do?
