4 SUGGESTIONS FOR POSITIVE PATCHING

1

Patching can be uncomfortable or frustrating for children, especially younger ones. Positive reinforcement and patience are the key here.

2

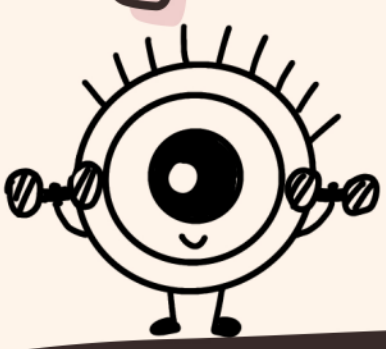
You can try making patching more fun with our Amblio Club companion app. Our upcoming release of Amblio Club will provide games for your child that can only be played while wearing a patch, giving your child a superpower that other children do not have!

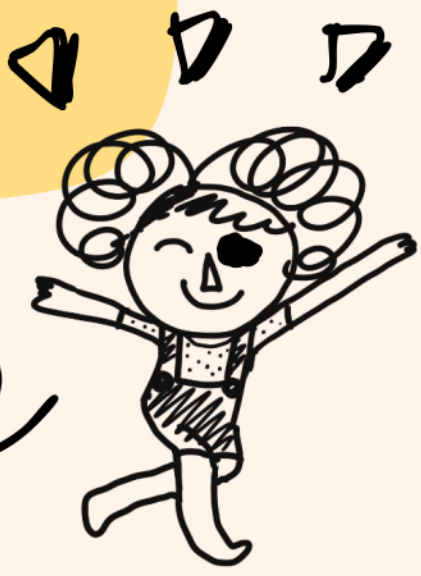
3

Modern patches come in various fun and colourful designs to make them more appealing.

4

Activities to stimulate the weaker eye: while the patch is on, engaging in activities like reading, drawing, or playing near-vision games can further stimulate the weaker eye and enhance its development.





Remember: Early diagnosis and prompt treatment of amblyopia are crucial for achieving optimal results. If you suspect your child might have amblyopia, don't hesitate to consult an eye doctor and discuss patching as a potential treatment option.
